IMPACT DESK · DEMO WALKTHROUGH · INTERNAL

The demo, on paper

A screen-by-screen walk through the Influencer Impact Dashboard — so you can present it with confidence even without the live app open. The screenshots are the real product; follow the talking points under each one.

READ THIS BEFORE YOU PRESENT

Sample data. The influencers shown (Nova Reels, Ghost Grid, Spike Steele…) are fabricated for demonstration — not real people. The app and its analytics are fully real and working; only the underlying numbers are illustrative until a live data vendor is connected. Safe to show anyone.

01 The board that replaces the spreadsheet

02 Why we rank by median, not average

03 Catching a follower-rich ghost

04 The booking decision, side by side

Prepared for **Sales** Product **Impact Desk (MVP)**

Companion to **“What it takes to run on real data”**

01 The board that replaces the spreadsheet

ON SCREEN

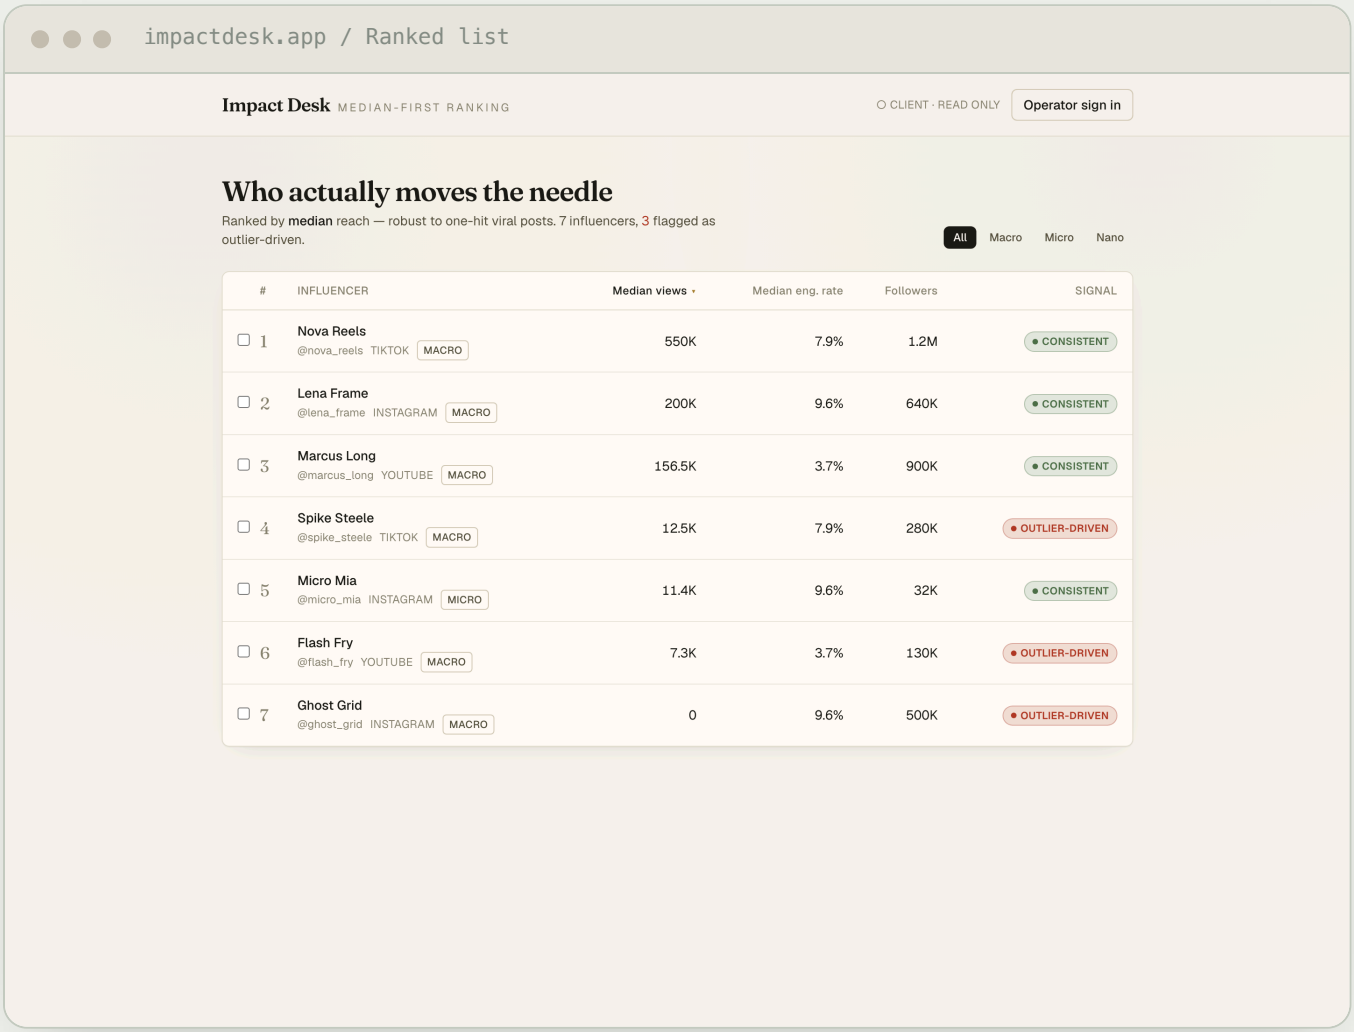

Every influencer the agency tracks — across TikTok, Instagram and YouTube — ranked by **median** (typical) views, not average. Green tags are genuinely consistent performers; red tags are accounts that look big but aren't.

SAY THIS

> “This one screen replaces the 50-tab spreadsheet. The top of the list is who actually moves the needle. And notice number seven — Ghost Grid — half a million followers, ranked dead last and flagged red.”

THE POINT

Followers lie; median reach doesn't. The ranking, the tiers, and the red/green signal are all computed by the app.

02 Why we rank by median, not average

ON SCREEN

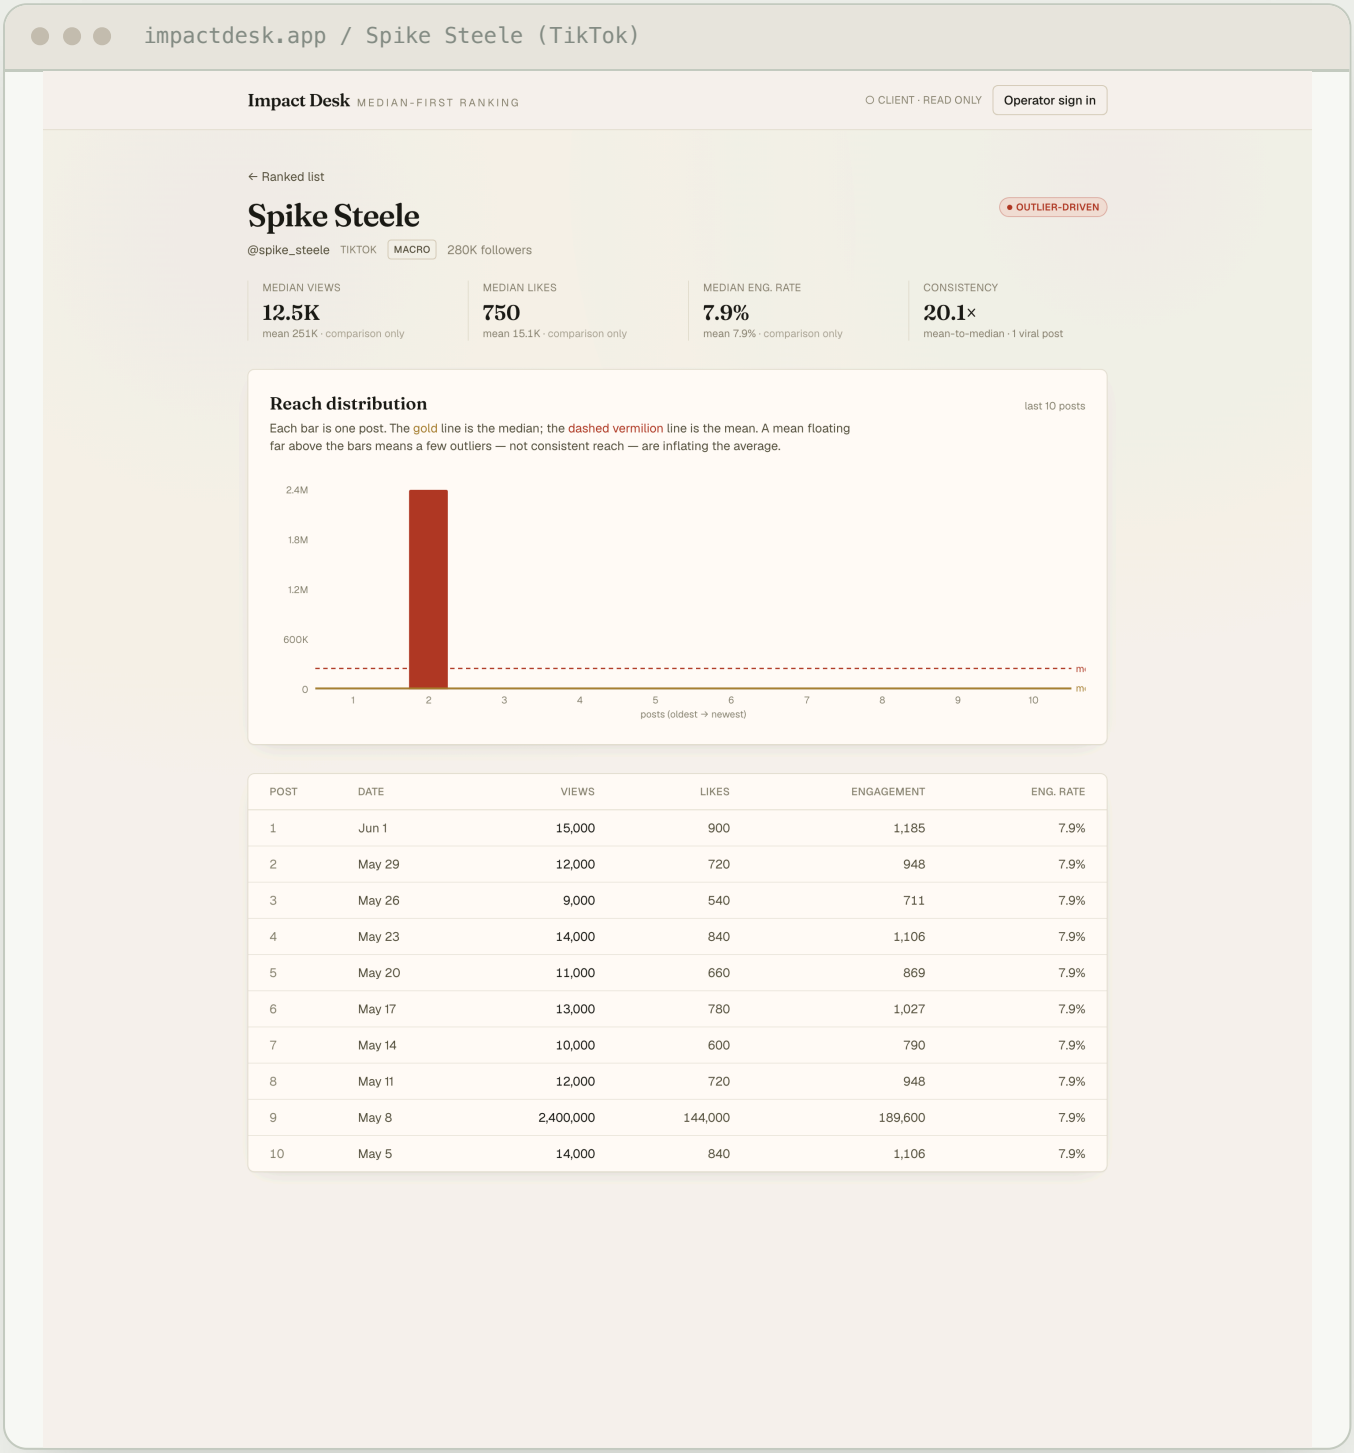

One influencer's detail. The big number is the median; the small “mean” beneath it is shown only for comparison. The chart is his last ten posts.

SAY THIS

> “On average Spike looks like a 250-thousand-view TikToker. But look — one post went viral at 2.4 million; the other nine sit around twelve thousand. The dashed line is the average, dragged up by that one hit. The gold line — the median — is where he really lives.”

THE POINT

Median 12.5K vs. mean 251K — the app caught a 20× inflation. Averages lie; the median tells the truth.

POST	DATE	VIEWS	LIKES	ENGAGEMENT	ENG. RATE
1	Jun 1	15,000	900	1,185	7.9%
2	May 29	12,000	720	948	7.9%
3	May 26	9,000	540	711	7.9%
4	May 23	14,000	840	1,106	7.9%
5	May 20	11,000	660	869	7.9%
6	May 17	13,000	780	1,027	7.9%
7	May 14	10,000	600	790	7.9%
8	May 11	12,000	720	948	7.9%
9	May 8	2,400,000	144,000	189,600	7.9%
10	May 5	14,000	840	1,106	7.9%

03 Catching a follower-rich ghost

ON SCREEN

The most extreme case — an account carried entirely by one lucky post. The table shows seven posts with no views at all, and one that hit 780K.

SAY THIS

> “Five hundred thousand followers, and the app ranks the reach at zero. Because that's the reality — nine dead posts and one fluke. This is the client's nightmare: paying an influencer who's really a ghost.”

THE POINT

Exposed in seconds. (Note: Instagram doesn't report shares, so the app simply leaves them out — it never guesses a number.)

Ghost Grid

OUTLIER-DRIVEN

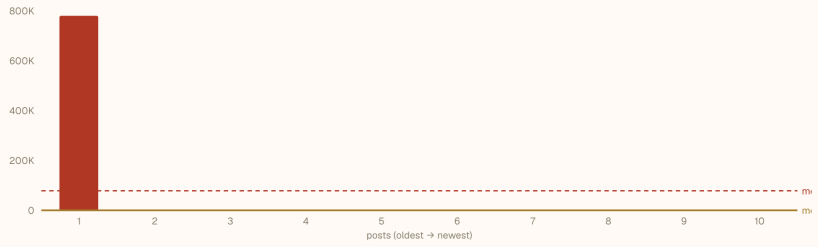

@ghost_grid INSTAGRAM MACRO 500K followers

MEDIAN VIEWS	MEDIAN LIKES	MEDIAN ENG. RATE	CONSISTENCY
0	0	9.6%	—
mean 78.2K · comparison only	mean 7K · comparison only	mean 9.6% · comparison only	mean-to-median · 3 viral posts

Reach distribution

last 10 posts

Each bar is one post. The gold line is the median; the dashed vermilion line is the mean. A mean floating far above the bars means a few outliers — not consistent reach — are inflating the average.

POST	DATE	VIEWS	LIKES	ENGAGEMENT	ENG. RATE
1	Jun 1	0	0	0	—
2	May 29	0	0	0	—
3	May 26	1,200	108	115	9.6%
4	May 23	0	0	0	—
5	May 20	0	0	0	—
6	May 17	900	81	86	9.6%
7	May 14	0	0	0	—
8	May 11	0	0	0	—
9	May 8	0	0	0	—
10	May 5	780,000	70,200	74,880	9.6%

04 The booking decision, side by side

ON SCREEN

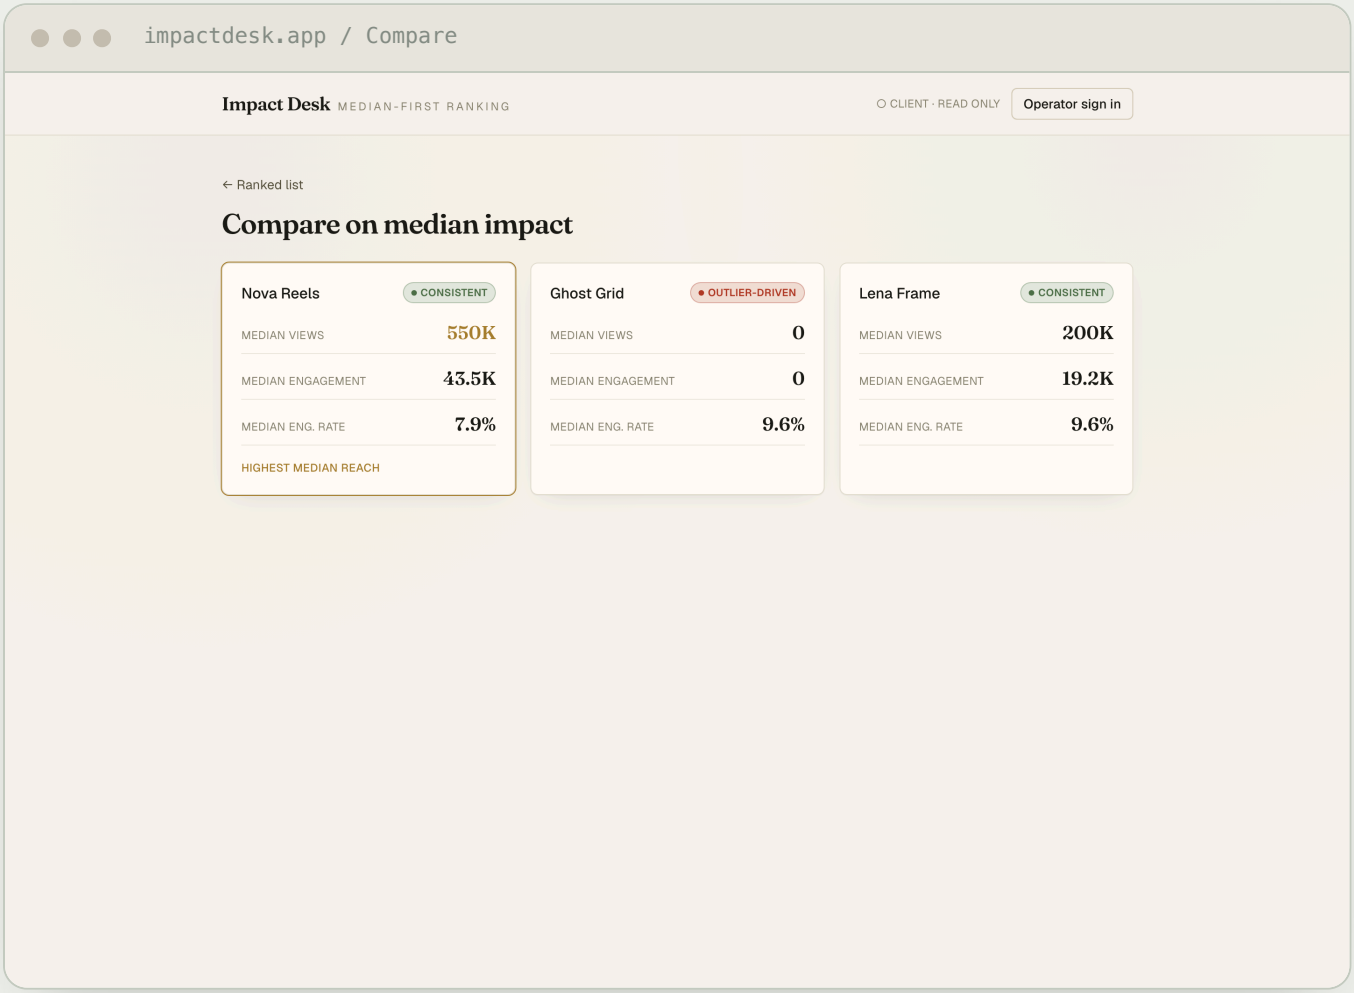

Line up any candidates on their median numbers. The strongest median reach is highlighted; the inflated account is obvious.

SAY THIS

> “When you're deciding who to book, you compare what matters — typical reach, not a follower count or a flattering average. Nova Reels wins on median; the ghost is plain to see.”

THE POINT

Turns “who should we book?” into a one-glance answer.

AFTER THE WALKTHROUGH

What it takes to make this real

Everything in this deck runs today. The dashboard, the median-first ranking, the outlier flags, the charts — all built and working. The only thing between this demo and a client's real influencers is one dependency.

THE ONE DEPENDENCY

A licensed **data feed** that returns, per influencer, the last ~20 posts with a **view count on every post**. Plug it in and the exact screens in this deck fill with the client's real influencers — no rebuild.

Full detail, vendor options and cost are in the companion brief, **"What it takes to run on real data."**

There's also an **operator mode** (behind a login) to pull fresh data, import a spreadsheet, recompute, and export — not shown here to keep the walkthrough to the client-facing views.
